

What is Anti-virus software?

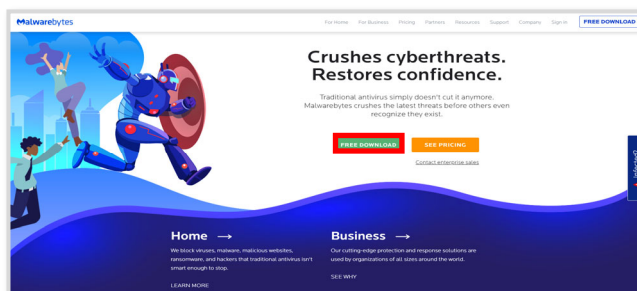

Anti-virus software is designed to prevent, search for, detect, and remove software viruses, and other malicious software like worms, trojans, adware, and more.

Why use one?

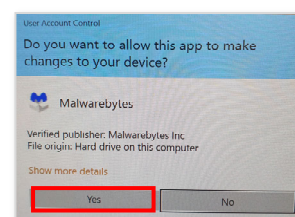

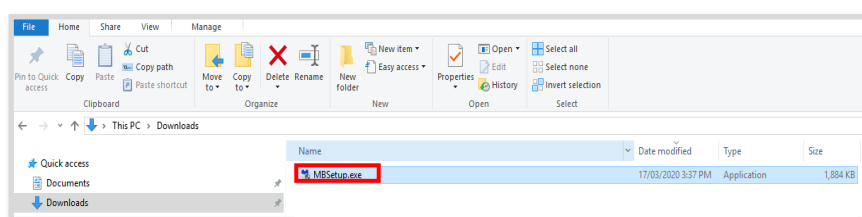

Anti-virus software is critical to have installed and remain up-to-date because a device without anti-virus software will be infected within minutes of connecting to the internet. **If you do not currently have any anti-virus software installed, see the free version available (example recommended below).**
